

SAM-RFI

Derod Deal, [Preshanth Jagannathan](#), Brian Kirk

The Problem: Radio Frequency Interference (RFI) contaminates data, hindering accurate measurements. We utilize segmentation to mimic human flagging approaches

Our Solution: SAM-RFI leverages Meta's Segment Anything Model (SAM2) to intelligently flag and mitigate RFI.

Powerful Tools: Provides tools for loading measurement sets, generating insightful waterfall plots, and even retraining custom SAM-RFI models.

Semantic Segmentation: Quantifiable metrics demonstrate the effectiveness of our RFI flagging. Improvements in speed with lighter weight models with no loss in performance.

The Result: Cleaner data, improved accuracy... maybe faster
